DUAL SAMPLE CHAMBERS MULTIPLY YOUR ADVANTAGES

Wescor's dual sample chambers incorporate all the advantages of our popular single chambers, multiplied by two.

FEATURES:

- Two cell deposit areas on the same slide mean true cost reduction. Dual sample chambers are priced for significant savings over two single chambers.
- Two deposit areas on one slide enhances productivity for those under regulatory work load limitations.
- Reduced time spent loading and unloading slides between the rotor, stainer, and microscope.
- Cell deposit areas are close together and easy to find, helping to speed sample analysis.
- Cytopro's 7mm diameter spot provides a 37% larger area to collect cells compared to the 6mm area of the Cytospin[®]. Dual sample chambers provide over 2.75 times the area of one 6mm spot.

Dual sample chambers feature Wescor's patented Cytopads[®] that are unsurpassed in controlling fluid flow from the sample chamber to provide excellent cell recovery in both chambers.

Priced at only 1.5 times the cost of a single chamber, Cytopro dual sample chambers are now available to help you reduce costs and increase productivity at the same time. Call today for ordering information.

CYTOPRO ADAPTER RING

Wescor now offers a Cytopro adapter ring (Cat.#AC-080) designed to fit on a Shandon Cytospin[®] II or III. Now you can have the unsurpassed ease and convenience of our Cytopro rotor in the Cytospin[®], allowing you to take advantage of Wescor's superior rotor technology and patented sample chambers for a minimum investment.

Cytospin is a registered trademark of Shandon[®] Lipshaw[®].
